Raw Output Stream
Outbound Self-Consistency Assertion Interceptor
Self-Consistency Assertion Audit
Release Output / Trigger Circuit Break

图1

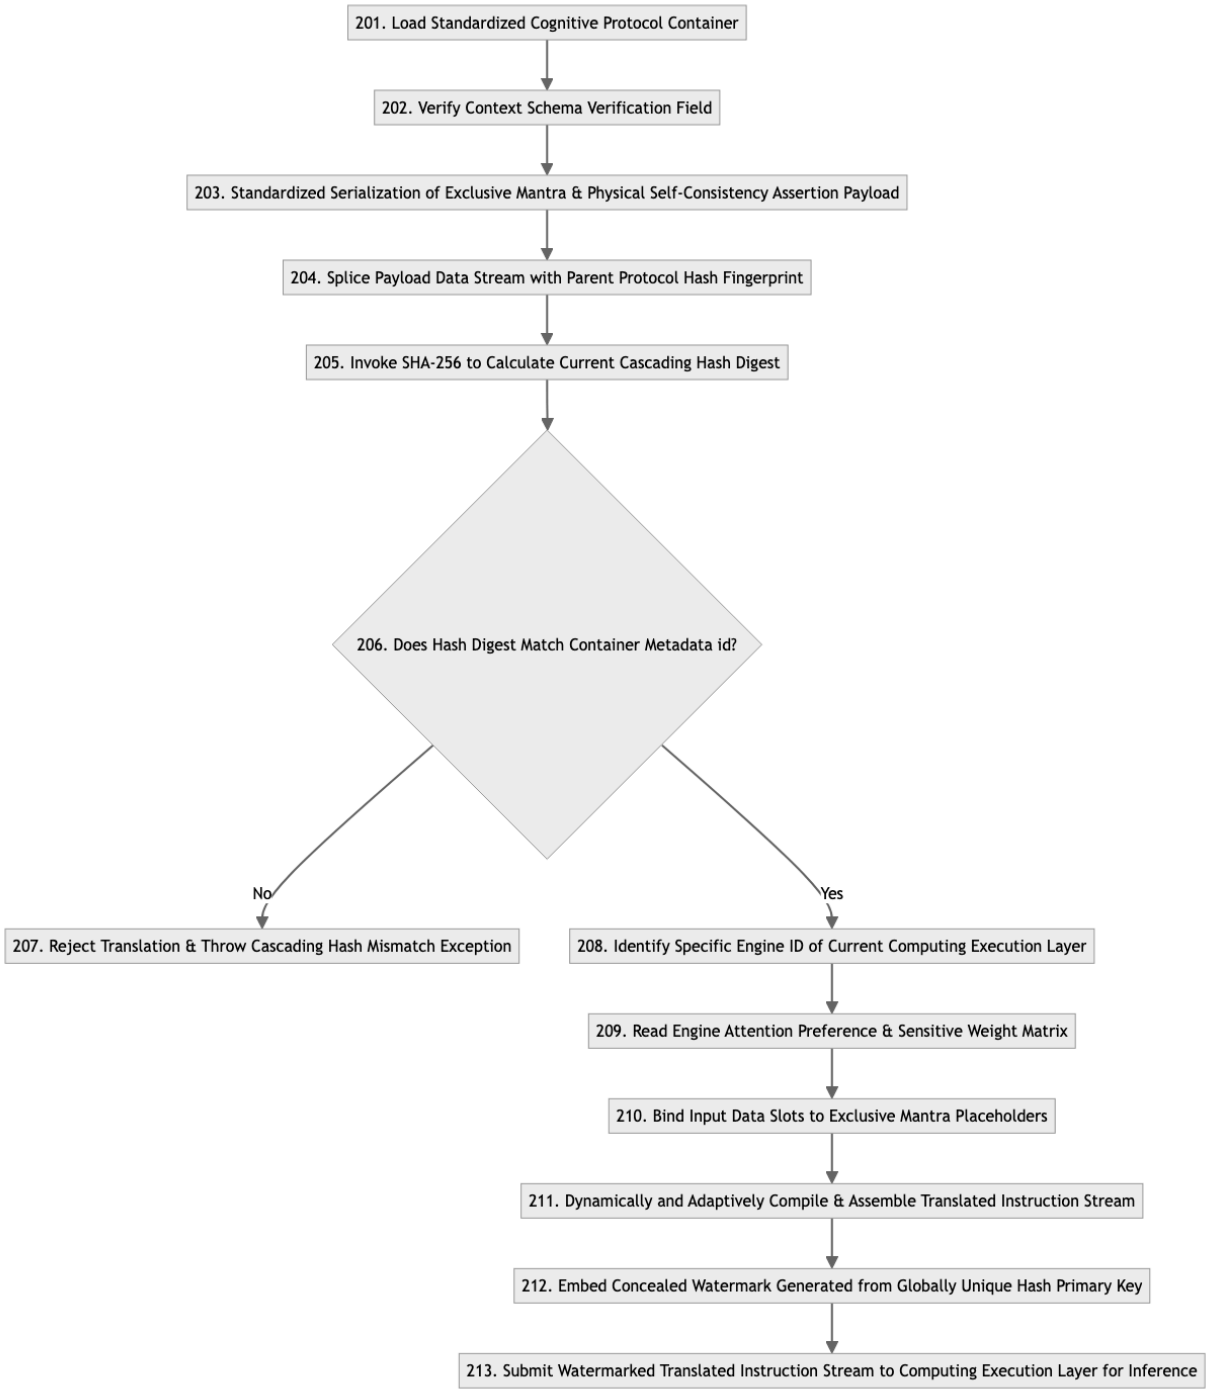

201. Load Standardized Cognitive Protocol Container
202. Verify Context Schema Verification Field
203. Standardized Serialization of Exclusive Mantra & Physical Self-Consistency Assertion Payload
204. Splice Payload Data Stream with Parent Protocol Hash Fingerprint
205. Invoke SHA-256 to Calculate Current Cascading Hash Digest
206. Does Hash Digest Match Container Metadata id?
No
Yes
207. Reject Translation & Throw Cascading Hash Mismatch Exception
208. Identify Specific Engine ID of Current Computing Execution Layer
209. Read Engine Attention Preference & Sensitive Weight Matrix
210. Bind Input Data Slots to Exclusive Mantra Placeholders
211. Dynamically and Adaptively Compile & Assemble Translated Instruction Stream
212. Embed Concealed Watermark Generated from Globally Unique Hash Primary Key
213. Submit Watermarked Translated Instruction Stream to Computing Execution Layer for Inference

图2

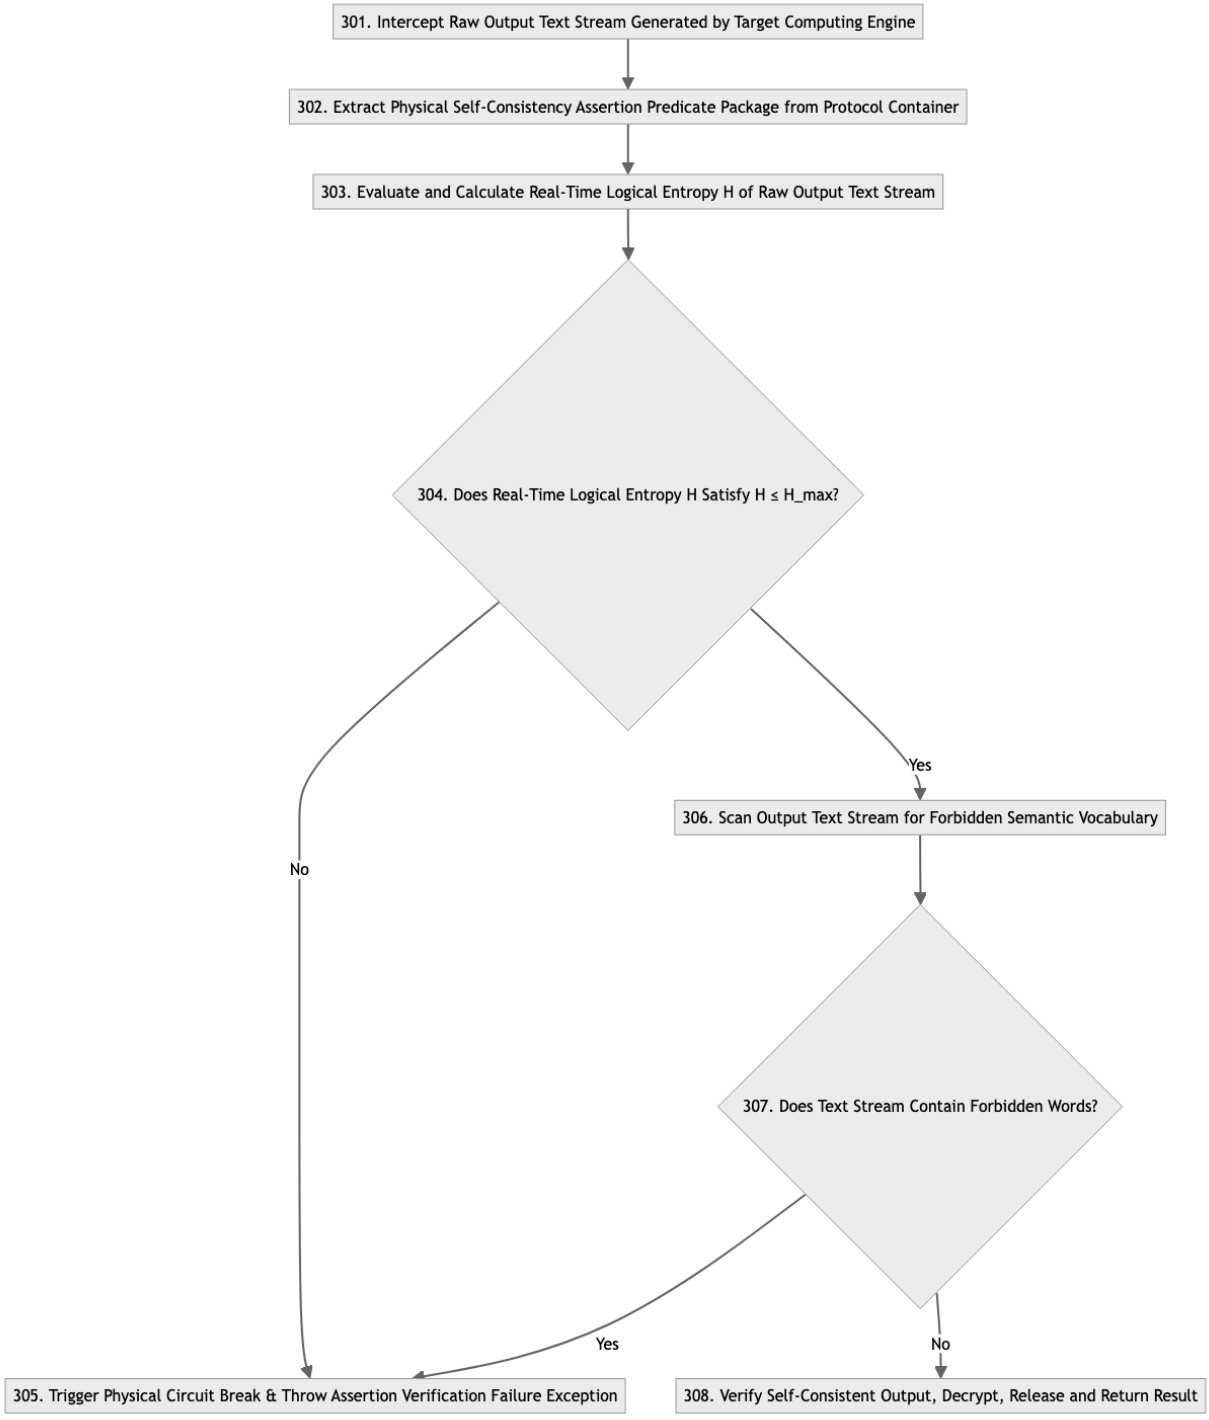

301. Intercept Raw Output Text Stream Generated by Target Computing Engine
302. Extract Physical Self-Consistency Assertion Predicate Package from Protocol Container
303. Evaluate and Calculate Real-Time Logical Entropy H of Raw Output Text Stream
304. Does Real-Time Logical Entropy H Satisfy H ≤ H_max?
No
Yes
306. Scan Output Text Stream for Forbidden Semantic Vocabulary
307. Does Text Stream Contain Forbidden Words?
Yes
No
305. Trigger Physical Circuit Break & Throw Assertion Verification Failure Exception
308. Verify Self-Consistent Output, Decrypt, Release and Return Result
